**Subject:** BLURB ON VENTILATION HOLES

Mike,

Below is a blurb that can be used as instructions for the smokers on the days when cigarettes are smoked with the blocked ventilation holes.

Ventilation holes have been placed in the cigarette filters of certain cigarette brands by tobacco companies to increase the amount of air flowing through the cigarette. The increased air flow reduces the amount of tar and other cigarette constituents that are taken into the body. Blocking these ventilation holes increases the amount of tar and other constituents that are received into the body.

With best regards,

*Bettie*
